

Monte Verde – keine Pre-Clovis Fundstelle

Axel Berger

Institut für Ur- und Frühgeschichte
Universität zu Köln

Seminar: Die Besiedlung des amerikanischen Kontinents
Wintersemester 2013/14
Dr. Thomas Hauck & Dr. Andreas Maier

Gliederung

① Stratigraphie und Datierung

② Hüttenfundamente

③ Bearbeitete Hölzer

④ Verschnürungen

⑤ Steinartefakte

⑥ *exotische* Pflanzenreste

⑦ Résumé

Lage am Rand des Gletschers

Stratigraphie

MV-7: Alte erodierte Flußschotter; MV-6: Organikreicher Schwemmschotter; Kulturschicht aufliegend auf MV-6 und 7; MV-5: Versiegelnde Torfschicht [Di97, 30].

Datierung der Schichten

④ Stratigraphic (MV) Unit

○ Artifact

Contact Y2

Contact Y1-2

- 11,990 ± 200 (TX-3760) bone
- 12,230 ± 140 (Beta-6755) wood artifact
- 13,565 ± 250 (TX-3208) charcoal
- 12,000 ± 250 (OXA-105) ivory artifact
- 11,790 ± 200 (TX-5374) carbonized wood
- 11,920 ± 120 (TX-5376) charred wood
- 12,450 ± 150 (OXA-381) wood artifact
- 12,650 ± 130 (TX-4437) wood artifact
- 12,740 ± 440 (TX-5375) wood artifact
- 12,780 ± 240 (Beta-59082) burnt artifact
- 12,420 ± 130 (Beta-65842) burnt artifact

Hüttenfundamente

Abbildung aus Scientific American 1984 [Di89].

Hölzer auf der Grabungsfläche

Hütte 3

Zone D

Lanzengriffe und -spitzen

Das Prunkstück

Verkeilt in situ und Außenbearbeitung

Der Quersteg aus der Nähe

Gelochter Fundamentstab

Schleife

In situ Verschnürung

Verknoteter Binsenhalm

Fast gelöster Binsenknoten

Bifaces und Schieferahle

Di97

Spitzen und Rillensteine

Wie exotisch war die Küste?

Résumé

Kein Résumé – bitte entscheidet selbst.

Vielen Dank
